

# Green to Wear 2.1 <sub>September 2023</sub> Sustainability Standards for wet process mills (Pre-treatment, Dyeing, Printing, Finishing, Washing, Tanneries and Faux leather)

# Facilities not approved for Inditex productions - D ranking

Mills are rated as "D" when at least one of the following non-compliance conditions is true.

| Compliance and Emission Control | 1. The mill has received 2 or more environmental fines in the last two years.  |
|---------------------------------|--|
|                                 | 2. The mill burns the waste in their facilities without authorization. The mill burns textile waste  |
|                                 | 3. The mill does not have consumption authorization for all its water resources.   |
|                                 | 4. The mill does not have authorization for its water discharge.   |
|                                 | 5. The mill burns coal/sludge/diesel/fuel oil using a filter without controlling emissions and   |
| Wastewater                      | 6. There is not an Effluent Treatment Plant (internal and/or external) to treat the processed w  |
|                                 | 7. The Effluent Treatment Plant does not properly treat 100% of the processed wastewater (<br>wastewater treatment measures nor the adequate size to be able to treat 100% of the mill's   |
| Permanganate for Denim          | 8. If the mill is using permanganate without having either of these protection systems: open aeration system. Please note that permanganate will soon be restricted for Inditex production |
| DMF for PU                      | 9. If DiMethylFormamide (DMF) is being used in the production unit without the mill having a be determinated.  |
| Chemical Management             | 10. The mill does not have an inventory of the stored chemical products used in the manufa   |
|                                 | 11. Less than 20% of chemical products has been controlled according to the strategy defin chemical products complies with ZDHC level 3. <u>Link to the Supporting Documents</u>           |
|                                 | 12. There are chemical products used for INDITEX productions classified as "C" in the curre  |
|                                 | 13. There are chemical products used in the manufacturing process recipe (outside the curr<br>are over the limit of the Inditex restrictions.  |
|                                 | 14. The chemical products stored at the mill are not registered in the chemicals inventory.  |
| Chromium VI prevention          | 15. The tannery does not control the chromium (VI) risk associated with the use of fat-liquori   |
|                                 |  |

### Facilities approved for Inditex productions - B ranking (1/2)

Mills are rated as "B" when at least one of the following non-compliance conditions is true.

| Emission Control    | 1. The exhaust air from combustion is not monitored or tested and does not comply with leg (e.g stenters, tumblers, curing chambers).   |
|---------------------|---|
| Consumption         | 2. The mill does not purchase and consume green energy coming from renewable resource   |
|                     | 3. The mil does not achieve the Excellent level of average annual water consumption. Link t   |
|                     | 4. The mill does not have an action plan designed to reduce the carbon footprint and energy   |
| Energy Efficiency   | 5. All the tanks and all the hot water pipes are not insulated (excluding those buried).  |
| Wastewater          | 6. The mill does not analyze on a monthly basis the Effluent Treatment Plant for both incomi party/government).   |
|                     | 7. Water sampling does not meet reporting limits of Zero Discharge of Hazardous Chemical  |
|                     | 8. Water sampling does not meet Global Effluent Parameters and heavy metals of the Found <u>Guidelines"</u>   |
| Solid Waste         | 9. Textile fiber and microfiber waste generated during processes, such as but not limited to or responsibly managed according to applicable legislation.                        |
|                     | 10. The mill does not have a hazardous waste inventory and does not send this waste to an a and ventilation and leakage prevention).  |
| Chemical Management | 11. Less than 100% of chemical products has been controlled according to the strategy define the chemical products complies with ZDHC level 3. Link to the Supporting Documents |
|                     | 12. The mill does not have a failure resolution process that is followed in the event of an RSL   |
|                     | 13. The mill does not keep a monthly register of the chemical products stored that are used   |
|                     | 14. The chemical inventory does not include the additional information: chemical function, an INDITEX" and level 3 of ZDHC Chemical Module when applicable.                     |
|                     | 15. There are not Technical Data Sheets (TDS) and Safety Data Sheets (SDS) available for al   |
|                     | 16. The chemical products inventory does not include lot number for all chemicals outside the   |
